

## J. Walker Middle School

The project consisted of two phases: the renovation of the original building and the new expansion. DCM relocated the gym to the new addition and designed an extra floor to house a larger cafeteria to serve 400 students as well as a media library. This allowed the school to offer extra-curricular art and sporting activities. The renovated academic spaces in the original building received new modern infrastructure, energy efficient lighting and new equipment. Although the building grew, due to the energy efficiency improvements, the gas consumption was reduced! Another DCM engineering success!
